Specifications

Fixture

The FL530 Flight luminaire is a 14" diameter Die Cast constructed luminaire with a single inverted mount COB optic. Photometric performance is achieved by a segmented reflector system that will deliver low glare illumination through its SoftVue™ lens system. The single electronic driver will power the COB delivering better than 80% efficacy. The high efficiency Heat pipe thermal management system

ensures a service life of greater than 100,000 hours based on L-70. The luminaire shall be UL listed in US and Canada.

LED's

The luminaire shall use high output, high brightness LED's. The LED's and printed circuit boards shall be environmentally friendly and 100% recyclable, they shall also be protected from moisture and corrosion by a conformal coating of 1 to 3 mils. They shall not contain lead, mercury or any other hazardous substances and shall be RoHS compliant. The LED life rating data shall be determined in accordance with IESNA LM-80. The High Performance white LED's will have a minimum life expectancy of approximately 100,000 hours with not less than 70% of original brightness (lumen maintenance), rated at 25°C. The High Brightness, High Output LED's shall be 4000K (2700K, 3000K or 5000K option) color temperature with a minimum of 70 CRI. Consult factory for custom color CCT. The luminaire shall have a minimum _____ (see table) delivered initial lumen rating when operated at steady state with an average ambient temperature of 25°C (77°F).

Optics

The optical system shall consist of a multi-piece segmented optical image duplicating system using reflector pieces of polished Alzak™, Hammertone aluminum, or a combination of the two. Each will surround the COB light emitter. When paired with Sternberg's SoftVue™ lens system unparalleled glare mitigation is achieved. Heat pipe technology effectively removes thermal stress on the electronic components by transmitting thermal energy through the liquid filled system and away from sensitive component. Excess heat is transmitted to the outside atmosphere via heat pipe and finned heat sync assembly integrally mounted to the luminaire optical system. IES distribution patterns of type 2, 3 and 5 will be achieved.

Electronic Driver

The LED driver shall be U.L. Recognized. It shall be securely mounted inside the fixture, for optimized performance and longevity. It shall be supplied with a quick-disconnect electrical connector on the power supply, providing easy power connections and fixture installation. It shall have overload as well as short circuit protection, and have a DC voltage output, constant current design, 50/60HZ. It shall be supplied with line-ground, line-neutral and neutral-ground electrical surge protection in accordance with IEEE/ANSI C62.41.2 guidelines. It shall be dimmable using a 0-10v signal.

For sources over 50w: The driver shall have a minimum efficiency of 90%. The driver shall be rated at full load with THD<20% and a power factor of greater than 0.90. The driver shall contain over-heat protection.

For sources under 50w: The driver shall have a minimum efficiency of 88%.

Photocontrols

Twist-Lock Style: The photocontrol shall be mounted externally on the body of the fixture and pre-wired to ballast. The twist lock type photocontrol is instant on with a 3-6 second turn off, and shall turn on at 1.5 foot-candles with a turn-off at 2-3 footcandles. Photocontrol is 120-277 volt and warranted for 6 years.
