

always innovating
always improving

**Sternberg Lighting introduces
a new concept of
roto-lock photocell usage:**

1. Provides the ability to control your luminaire via a utility grade twist-lock photocell, rather than a button photocell.
2. Reduces cost by eliminating the need for a more expensive utility fitter under the luminaire.
3. PEC eye can be directionally adjusted in the field in 90 degree increments.
4. Allows use of a higher end PEC without any significant aesthetic change in the luminaire.

Soon to be available in the
Town Square series LED acorn
and Yale series LED acorn
